

INSTRUCTIONS/CAUTIONS FOR LIGHT SENSOR FOIL - cod NASYSP08.1

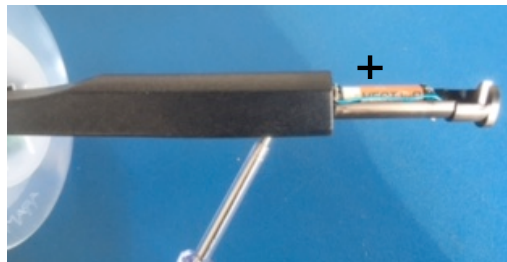

This plastic foil has a special sensor on the point and must be used with Nasycon jackets with magnetic target cod NASYJK01 or NASYJK02.

To use it the ON/OFF switch must be placed in ON position: at this time a sound signal will be activated as test. If you do not listen any sound the foil could be not OK.

The foil is available with red or green guard light with 2 different sounds one for each light colour for a better scoring identification.

An auto switch-OFF procedure is present after 10 minutes of last hit in order to save battery life. Anyway when the foil is not used, is better to place the ON/OFF switch in OFF position.

The weapon NASYSP08.1 has n 1 alkaline battery 12 Vdc 53mAh placed in the handle of foil

-In order to insert or replace the battery in the foil handle extract the holding battery using a small screwdriver as in the picture above, placing attention to the polarity (+ and – poles).
